

Proposal

Bicycle sharing project here user can pick a cycle from a particular location in Basundhara area and drop that cycle in a fixed location. Cycle owner will get notify by email when his cycle will be picked. User have to pay for using bicycle in some reasonable cost. As unit testing here we will test pick cycle and drop cycle function. As our first idea were like this we will have a website and user will register our site with National Id. Those user have bicycle and use only for 2-3 days and rest of the day they can provide rent for some cost per day or hour. Those user need bicycle can provide post in our site and communicate throw comment. Owner and borrower can fixed hour and price. Payment will done online like bKash and site owner will get some percentage from bicycle owner. As part of posting we will test post function too.
